

The diagram shows a horizontal baseline. A solid curve starts at the left end of the baseline, rises to a peak, and then falls back to the baseline at the right end. A dashed curve follows a similar path but is narrower and lower than the solid curve. A vertical line extends upwards from the center of the baseline to the peak of the solid curve.

Strength
of signal

The diagram shows a simple U-shaped curve, representing the profile of a dish, with its open end facing upwards.
